Information for purchasing Alan's books, CDs, DVDs and DONATIONS:

Canada and America: PayPal, Cash, personal checks &
for the US, **INTERNATIONAL** postal money orders / for Canada, INTERNAL postal
money orders

(America: Postal Money orders - Stress the **INTERNATIONAL** pink one, not the green
internal one.)

Outside the Americas: PayPal, Cash, Western Union and Money Gram
(Money Gram is cheaper; even cheaper is a Money Gram check - in Canadian dollars:
mail via the postal services worldwide.)

PayPal Orders: USE THE [DONATE](#) BUTTON ON THE WEBSITE - AND -
Send a separate email along with the donation (list your order, name and address)

Click the link below for your location (ordering info):

Hi folks, I'm Alan Watt, and this is Cutting Through the Matrix on the 13th of August, 2012. For newcomers, help yourself to the website, cuttingthroughthematrix.com; there's lots of stuff for download on it for free where you can start to understand the system you're born into, your parents were born into, and you didn't know, really, what was going on, and they didn't know what was going on. And like all mammals, if your parents don't warn you, if you don't know, then you're prey to the predators; and that's the world you're born into. We've been under a scientific mindset, basically, for a long

time and they have been diddling with our minds for a long time too, to make a compliant society that parties and has good times and bad times and is always on the edge of bankruptcy, of course; and that's part of the system you're born and raised into because the big boys have a plan – a world plan – and you're living through it in your lifetime— a very old plan, by the way. You'll find out a lot about it: the organizations, foundations behind it; armies of nongovernmental organizations; so many think-tanks you can't count them all; it would take a whole bunch of broadcasts just to go through them all and what they specialize in. Because, you're living in a new feudal system of private ownership (including private intelligence ownership as well) across the world. So, help yourself to the website.

Remember too, you are the audience that bring me to you. You can help me keep going by buying the books and discs at cuttingthroughthematrix.com and you can also donate as well because I don't bring on advertisers as guests or sell you anything or have shares in anything that's sold so I depend upon you, the listeners, to support me. So, if you like what you hear you can (and I know lots of you certainly have made awfully good use of the websites according to the downloads) help me keep going. From the U.S. to Canada, now, you can still use Personal Checks or International Postal Money Orders from the Post Office, you can send cash or you can use PayPal. Across the world you've got Western Union, Money Gram and PayPal once again. And straight donations are awfully, awfully, really seriously welcome right now.

You're living through a plan; a plan, of course, where billions of people across the world are manipulated along the way through the generations in preparation for the unification of a world system, and first they go into multiculturalism which really is no culture at all and then they dissolve that gradually and bring in a new world culture of obedience— and that's the whole key to this system: obedience to the world system; and you're actually going through big stages of it right now. The new world order doesn't plan to bring in a nice happy world order; it's really to do with a planned society and eugenics – big time eugenics – and obedient little workers for them for the next, well, (who knows?) many thousands of years. And I'm not kidding about that, thousands of years, because Charles Galton Darwin in the 1950's talked about it in his book **The Next Million Years**, in fact; he said it was on behalf of his own class, his own elite group. He talked about altering society to suit themselves and to bring in an ordered peasant group, basically, at the bottom who would never complain, be very happy on very little— and that's what they're into today in fact. Now academia is onboard because academia, especially the higher academia that in Britain you call the granite stone ones, and it's the Ivy League ones in America; that's your managerial class of course that takes over on behalf of those who already own the world and so they're the ones that get the higher education into all of this, in eugenics and organization and domination, etcetera. The other ones of course don't get this, the red-brick universities they call them in Britain; they don't get the same kind of stuff taught to them. So, academia is pretty well all onboard with this, all hoping to survive and make a good paycheck for themselves as they help to alter the mindset of the populations which they dominate over, basically. And as I say, you're all part of it. Exciting time, really, because you'll never be bored if you are conscious at all; those who are unconscious and in T.V. land, well, they won't notice— they'll adapt.

Back with more after this....

Hi folks, I'm back Cutting Through the Matrix, talking about the big system and how exciting it is, in a sense, because if you're aware of what's happening, the reasons why things are happening, you're not fooled by the mainstream media, which of course is owned by, really, one organization across the world that's got Reuters and the Council on Foreign Relations/Royal Institute of International Affairs— it's all the same bunch

really that run all of your media and they never give you the straight truth on anything. Their job is to manage us all through the big changes and they do a good job of it, mind you; look how well they've done so far— look around you. But remember too that this system that's coming in is a feudal system, and that's very, very important because Quigley and others talked about it who worked for the Council on Foreign Relations and they were the historians, in fact, and they talked about this new feudal system. It started with public/private; that's how we first heard the terms, public/private enterprises, as your tax money pays for big structures to go up, etcetera, for private companies to be handed it for peanuts, like gifts almost, to run themselves; so you pay for the maintenance and they take all the profit. But also too they've even privatized intelligence services and everything else (have for a long time by the way, an awful long time). I mean, your country itself is a private corporation. It's really astonishing the reality as opposed to the fiction that you're brought up to presume; and that's what they do in school: you presume things. You're led to presume things and then you never think outside of the box once you're in it.

What the big boys have always done is control monopolies and create monopolies; once they have monopolies in place.... And the monopolies, remember, they said at the beginning when they formed the Cecil Rhodes Foundation along with Rothschild and they became the Royal Institute for International Affairs, they said they'd take over the world and take over all of its natural resources – now that includes people too; you are a natural resource; but all of the gold, diamonds, water, food, minerals, everything basically, is under private corporations, even though they'll often use your tax money because the biggest welfare recipients are these private corporations. But they're going over it and of course 5 big agribusinesses run the world's food supply today, and probably it's the same shareholders, the majority shareholders, who are in each one of them. So, it's really one company as far as I'm concerned and they're ensuring that all of the peasantry get to eat the GM food. And of course the GM stuff and corn is all fed to the cattle and all the other animals too, so it's all through their system as well; so one way or another you get it. And they themselves at the top have made, you know... there's been big articles about how they won't eat it themselves; they have their own special supplies of *real* food, the normal stuff. But it goes right down to your grocery stores. And Australia has got that too where only two companies, basically, Coles and Woolworths, basically, are taking over the whole food supply in grocery stores for the country. I'll put this one up tonight for those who want to look through it...

A new report by Master Grocers Australia says supermarket giants Coles and Woolworths are deliberately killing competition.

(Alan: Well that's what they've always done, you see, these boys. You know, competition is a sin, according to Rockefeller and others. It says...)

Master Grocers Australia, which represents smaller operators, says Coles and Woolworths are saturating the market and opening oversized supermarkets to lock out competitors.

And they do that; we've seen that with Wal-Marts and all the rest of them too when they come into an area and they cut their prices until everybody goes to them and the small hardware stores and everything else just fall apart and out of business and then they jack up their prices after it, once the competition is eliminated. So, this is the sort of stuff that's going on. And you must understand it's a very dangerous thing when agribusinesses, big agribusinesses and big chain stores probably related to the agribusinesses, are taking over your food supply; I mean, they've got you by the short and curlies. It's a dangerous situation, believe you me. And also tonight I'll put up...

The Takedown of Australia

It's about what's happening there, why it's happening, and the means they're using to push Australia down the path into total, well, private ownership by the big ones at the top— not for the ones who already thought they owned their homes, etcetera, because everything is a con through legalism. I'll put that up too.

Now last weekend too I mentioned how the...

EXCLUSIVE-U.S. banks told to make plans for preventing collapse

(A: And Reuters talked about it. The Chicago Tribune talked about it too. And it says that...)

U.S. regulators directed five of the country's biggest banks, including Bank of America Corp (BAC.N) and Goldman Sachs Group Inc (GS.N), to develop plans for staving off collapse if they faced serious problems, emphasizing that the banks could not count on government help.

The two-year-old program, which has been largely secret until now, is in addition to the "living wills" the banks crafted to help regulators dismantle them if they actually do fail. It shows how hard regulators are working to ensure that banks have plans for worst-case scenarios and can act rationally in times of distress.

Well, they do act rationally; what they do is they funnel all the cash into overseas accounts while they crash or before they crash like they did the last time because they knew what they were bringing on. There's nothing more crooked than the banking system— it's always been that way; the people who run them have got this in their blood or something and it's always really been that way: it's a con from top to bottom.

Now, this one article here too is about coal. Because under the EPA and all, there's a greening agenda, etcetera, and the carbon emissions, they're trying to put all the coal mines out of business, which is going to cause catastrophe, really, down the road. This article here is a good one on a good massive mine in the States. And it says...

About one train per hour. That's the target loading rate for the massive silos, conveyors, and hoppers at the North Antelope Rochelle Mine in Wyoming, the most productive coal mine in the world. And on a cool, nearly windless day in late March, Scott Durgin, a regional vice president for Peabody Energy, was happy. Standing in the mine's dispatch office,

(A: And they go through how much they put out every day; it's just astronomical— astronomical. And it says there's enough coal there to last about 50 years at least, probably longer. And they actually put out three tons of coal per second...)

The scale and productivity of the mine are difficult to imagine. It produces about three tons of coal per second. But despite its staggering output, the North Antelope Rochelle Mine—along with the other 1,300 coal mines operating in the U.S.—is being threatened by the Obama administration.

(A: Well, it doesn't matter what administration is in, folks; it's the same agenda—you've

got to start learning that. The same agenda goes on, the clowns in front are simply changed— and the clowns don't run the country; the ones behind them do.)

On March 27, just two days before my visit to the mine, the Environmental Protection Agency announced a proposal that would, if enacted, outlaw the construction of new coal-fired power plants in the United States. The EPA's motives are clear: it believes that these plants, by emitting carbon dioxide in profusion, contribute to global warming.

There's no denying that coal has earned its reputation as a relatively dirty fuel. But those concerned about CO2 emissions and climate change should realize that the administration's attack on coal is little more than a token gesture. The rest of the world will continue to burn coal, and lots of it.

(A: China will and India; they've got carte blanche, as much as they want, under the United Nations agreement and the World Trade Organization.)

Reducing the domestic use of coal may force Americans to pay higher prices for electricity,

(A: Well it certainly will...)

but it will have nearly no effect on global emissions.

So, it's amazing. The mine's coal seam, the main coal seam, is 80 feet thick it says here. And of course you've got a lot of generators working on that stuff and your energy prices are going to go through the roof eventually because that's part of the austerity program, so that you'll have no spending money left at the end of the month; it will all go in bills and so on— that's what austerity is all about. That's why they designed this program.

And also, in Germany - and Germany is only one country in this whole European Soviet Union amalgam that they call the E.U. - it says that...

Leading politicians from across Germany's political spectrum called this weekend for a referendum on whether to transfer more powers

(A: More powers, right?)

to Europe, as a survey suggested most Germans would reject any move toward debt-sharing among states.

The head of Germany's main opposition SPD party, Sigmar Gabriel, warned Sunday that the country's parliament is currently working "in a permanent state of emergency under constitutional law" as it seeks to overcome the euro zone's debt crisis.

Well, every country in the world is pouring money into the so-called "debt crisis." There's been no accounting to where it goes; it's another big banking scam. But remember what the Council on Foreign Relations says: "we always use a crisis to our advantage." Well, you see, they wanted (and this was the old thing under the Council on Foreign Relations plan/the Royal Institute for International Affairs plan, to bring in the global society) all the central banks, which they would construct, private banks that

they would own – remember, the Royal Institute for International Affairs/CFR are private themselves – they’d bring it in across the world under an umbrella of the Bank for International Settlements, and the IMF, of course, would be the guys who would do the bookkeeping for every single country once they have them all amalgamated. They’ve still to do it with the Americas and they’re doing that through terrorism: we’ve got to keep binding ourselves together to save ourselves, etcetera, etcetera; and the Far East Rim too, as it goes under China. So, it’s all working out the way it’s supposed to go, actually, and the crisis is essential to bring this new system in and of course what happens to the money doesn’t matter— they’ll never tell us where it all went, because money is a con game: it’s all based on fraud to begin with, this debt stuff and so on. I mean, when you borrow you get literally nothing except a check, you see; there’s nothing backing it up: there’s nothing moving across the country that’s tangible— it’s all electronic blips so it’s all a con game anyway. But they’ve got to train the public to believe in it, you see. And the public do. And nothing will change until these guys – these cronies – are out of the system and a new system is brought in— it won’t change: it can’t change with the same people in it all the time... then their sons take over.

And this is an odd article here. It says...

Infrastructure protection

Obama considering executive order for infrastructure protection

President Barack Obama is exploring whether to issue an executive order to protect the U.S. critical computer infrastructure from cyber attacks;

(A: Now I thought they’d already done a whole bunch of them already. And they have. Most of the things that they really do they never tell you, you understand.)

White House sources say an executive order is being considered after a 2 August procedural vote in the Senate that all but doomed a cybersecurity bill endorsed by Obama as well as current and former national security officials from both Republican and Democratic administrations

Well, you see, they already have private organizations doing the cyber security and cyber attacks and we’ll talk about that later in the broadcast.

Back after this break...

Hi folks, I’m Alan Watt and we’re Cutting Through the Matrix. Talking about this possibility of a new executive order for infrastructure protection as though they had none at all. So, something else is going on behind it of course. And as I say, they’ve got so many private groups now all staffed by ex-CIA guys, NSA, that do all the work too and cyber attacks even as well. So, there’s something else going on there as it gives more and more power to the Executive Branch.

In Iran too, of course, they had the earthquake. What a coincidence because this is old stuff to do with HAARP technologies; I mean old stuff. You go into the United Nations agreements which they’ve updated every other year since the 1970’s and they said that it could cause earthquakes, tsunamis, blah-blah-blah, a whole bunch of things it can cause; meaning they’d already tested it out and they can do that. So, Iran gets hit by an earthquake and it kills at least 180 people over the weekend there.

A 6.2-magnitude earthquake has levelled villages and damaged homes in

north-western Iran, killing at least 180 people and injuring more than 1,350 others, state TV reported

The quake hit the towns of Ahar, Haris and Varzaqan in East Azerbaijan province, the TV report said. At least six villages were totally levelled, and 60 others sustained damage ranging from 50% to 80%, it said.

The epicentre of the quake was a region between Ahar and Haris, about 300 miles north-west of the capital, Tehran, according to Khalil Saei, local Crisis Committee chief...

So, about 40 years ago Brzezinski said this kind of technology would be used. And it really is far more. It can even alter weather, it can create earthquakes, as I say, tsunamis, and this is all stuff signed into the agreements on warfare techniques to do with weather warfare at the United Nations since the 70's and they said it's worse than the Atom Bomb because the chaos it can rip across a whole continent, if they want to, is phenomenal—if they want to. But they can also localize it as well and they can also concentrate a whole bunch of the HAARP projects together and bounce it off the ionosphere and focus it like a magnifying glass would focus it down into a pin-prick on the world and give you earthquakes as well. So, we'll never know because the beauty of it is they never have to admit to it— that's the beauty of it all. Silent Weapons for Quiet Wars, you know; that's what it is. And of course they're really out for Iran and they have been for years and years and years.

Now, the Olympic games, this bread and circuses, is nothing new; I mean, the ancient Romans did it, especially during times of crisis. When things aren't going too well and you've got a bit of inflation and high prices they always bring out bread and circuses, but the cost of everything today, these bread and circuses, is phenomenal and the public pay for all of it. And they pay and pay forever. It says...

Olympics 'will have paid for itself by 2021'

(A: Well, I would say that even that's a "maybe," if they're lucky.)

Leading economists have said that ultimately the London Olympics will starting making the city money - although not until 2021.

The Games came in at a revised budget of £10 billion, although the Centre for Economics and Business Research also said that people who stayed at home or took holidays during the Olympics cost the economy £1bn — taking the total cost of the Games to £11bn.

The Stratford area of East London was transformed by the Games and CEBR said that if politicians properly exploited the regeneration of the area then they could start generating an extra £1.8bn-a-year into the economy.

Well, that won't happen. Look where else they've put these things up and they start falling apart in no time at all and that's what will happen here too but you're left with the debt— you're left with the debt. It taught a lot of lessons to the public though, that you're now in a new world order and you've got massive security because of terrorism is everywhere you see and it always will be from now on until eternity, apparently. As we go through massive changes you've got to have something to get martial-law type situations in. So, you're all getting trained that nowhere is safe. Nowhere is safe,

you're not safe and you need all this Big Brother stuff to keep you safe, you see.

Also, I noticed too, Japan's economy is really down, big time, and they're really suffering financially; but also it says...

'Severe abnormalities' found in Fukushima butterflies

(A: It's out today and it says that...)

Exposure to radioactive material released into the environment has caused mutations in butterflies found in Japan, a study suggests.

Scientists found an increase in leg, antennae and wing shape mutations among butterflies collected following the 2011 Fukushima accident.

The link between the mutations and the radioactive material was shown by laboratory experiments, they report.

The work has been published in the journal Scientific Reports.

(A: That's the name of the journal: Scientific Reports.)

Two months after the Fukushima Daiichi nuclear power plant accident in March 2011, a team of Japanese researchers collected 144 adult pale grass blue (Zizeerimaha) butterflies from 10 locations in Japan, including the Fukushima area.

When the accident occurred, the adult butterflies would have been overwintering as larvae.

By comparing mutations found on the butterflies collected from the different sites, the team found that areas with greater amounts of radiation in the environment were home to butterflies with much smaller wings and irregularly developed eyes.

"It has been believed that insects are very resistant to radiation,"

(A: That's what they used to always believe...)

"In that sense, our results were unexpected..."

(A: Because they had mutated.)

Prof Otaki's team then bred these butterflies within labs 1,750km (1,090 miles) away from the accident, where artificial radiation could hardly be detected.

It was by breeding these butterflies that they began noticing a suite of abnormalities that hadn't been seen in the previous generation - that collected from Fukushima - such as malformed antennae, which the insects use to explore their environment and seek out mates

Six months later, they again collected adults from the 10 sites and found that butterflies from the Fukushima area showed a mutation rate more than double that of those found sooner after the accident.

So, it's actually increasing.

Back with more after this...

Hi folks, I'm back Cutting Through the Matrix. And also, for those who are not aware of it, it says...

NNSA/FBI conduct 100th WMD counterterror exercise

(A: In the U.S. It says...)

...the University of Cincinnati (UC) on Aug. 9 was the 100th such exercise conducted by the NNSA's Offices of Counterterrorism Policy and Cooperation and Global Threat Reduction and the FBI.

The exercise, said NNSA, is part of NNSA's Silent Thunder

(A: They love these names, Silent Thunder...)

table-top series,

(A: It's like some sort of game or something, video game.)

aimed at giving federal, state and local officials, first responders and law enforcement critical, hands-on experience in responding to a terrorist attack involving radiological materials.

(A: Amazing, you had none of this during the Cold War when we were supposed to all get blown up.)

NNSA began the Weapons of Mass Destruction (WMD) Counterterrorism Exercise Program in 1999 and it has grown to include both domestic Department of Energy facilities and private sector locations such as hospitals and universities, said NNSA. The exercises carried out primarily in the U.S., have also included foreign participants.

During the UC exercise, said NNSA, an official from the International Atomic Energy Agency observed for the first time for the Silent Thunder series...

So they had an observer there from the Atomic Energy Agency.

So, it's just amazing what's really going on and how everything is combined now, all intelligence— private intelligence too, and foreign participants as well— different armies etcetera, all helping out and yada-yada-yah because we're all one world— we're global now, you see; and you have to train the people now simply to obey-obey-obey— that's what fear is supposed to do, you see. You obey authorities in situations where if you didn't have some sort of crisis you shouldn't be obeying them at all; you see, you give up all your rights by just acquiescing to their demands and going along with things.

And, also, it says here...

U.S. government is secretly spying on EVERYONE using civilian security cameras, say Wikileaks

(A: Now, Wikileaks is really under attacks right now by an agency within the United States, it seems to be, and it says that...)

Anyone who takes a photograph at high-risk locations is logged as a suspected terrorist on a vast network of secret spy cameras linked to the U.S. Government, according to leaked emails.

(A: If you ever saw "**Enemy of the State**," the movie **Enemy of the State** done in the 90s, they had all that shown in there where the NSA could use all their own official cameras and all the private ones through stores, alleyways, and subways and so on and put them all together and follow anybody anywhere, so— they've actually been doing this all along. And it says...)

People pointing cameras in New York are regarded as suspicious and the facial recognition images of them from the civilian CCTV are fed into a data centre run by U.S. firm Abraxas.

(A: Now, more on Abraxas later because this is a big story on Abraxas and Stratfor; Stratfor is the agency they combined with recently. These are private—very big private; they're actually arms of the NSA, but they're private and they're huge, all staffed by NSA and ex-CIA members, etcetera. That's how you get things done in the real world: you don't go through something that has to be responsible to the public or public complaints. These guys are private.)

The system then connects with hundreds of other cameras in a bid to pinpoint potential terrorist activity, it is claimed.

Details of the system emerged from emails released by whistle-blowing website Wikileaks. The issue has caused outrage among privacy campaigners amid fears that it could be abused.

(A: Well of course it will be abused; it's probably been abused since they started it.)

It has disturbing echoes of the film, *The Bourne Identity* starring Matt Damon, in which CIA officials use a network of spy cameras to track around the world someone they thought they had assassinated.

(A: Well, as I say, they already had it long before that with **Enemy of the State**.)

According to the email released by Wikileaks, pictures of people's faces are encrypted and sent to a fortified data centre at a secret location.

The TrapWire system

(A: That's what they call it and we're all under it, by the way, everywhere, have been for a while.)

is run by Abraxas and is linked to civilian CCTV cameras.

The firm owned by the Cubic corporation is apparently staffed by large numbers of former CIA employees.

(A: And as I say Stratfor is a partner with them.)

The cameras and its Trapwire system are one of its methods it uses to do this.

TrapWire is used by the U.S. Department of Homeland Security in a bid to deter terrorist attacks - or catch those responsible once an incident has happened.

According to the company's own documents from 2007, TrapWire is 'a unique, predictive software system designed to detect patterns of per-attack surveillance.'

(A: I guess they mean "pre-attack surveillance.")

This includes 'photographing, measuring and signaling'.

So, we're well under this whole system, and I'll put this link up tonight; they're using it in London, Canada and even in Australia— it's worldwide, this organization. And really, it's unaccountable to the public because, you see, they're private; this is how you get around it all—private. You've got to understand too that the Royal Institute for International Affairs, apart from being a private nonpolitical organization that runs the world and all politics and they put in your prime ministers and presidents and they staff all your high bureaucratic positions too across the world in every country (they're also private), but they're also an intelligence agency - the first big one - because even their headquarters at Chatham House in London, England, was turned into the combined British-American forces during World War II, the OSS. So why did they do that? They did that because, you see, all their agents already were the spy system for the elite of Britain, already— still are. I've noticed too, even the Stratfor documents... because often they'll put articles out there... just like the Council on Foreign Relations... In fact, their goals for the world, when you look at them, are identical to the Council on Foreign Relations; completely all merged together, all these private organizations, running us, you see, and telling the government what to do. Quite something; it really is quite something.

And, also, it says...

epic.org Electronic Privacy Information Center

White House Pulls Down TSA Petition

At approximately 11:30 am EDT, the White House removed a petition about the TSA airport screening procedures from the White House "We the People" website. About 22,500 of the 25,000 signatures necessary for a response from the Administration were obtained when the White House unexpectedly cut short the time period for the petition. The site also went down for "maintenance"

(A: They said...)

following an article in Wired that sought support for the campaign.

So that's what they do; they give you "you can fill this in and we'll have a look at it," you know, and then once they see that there's going to be too many signatures on it and you'll have to look into it they simply pull it— and that's your system for you.

And tonight too I want to mention Stratfor...

Stratfor emails reveal secret, widespread TrapWire surveillance system

(A: These are guys who are in with Abraxas as well. It says...)

Every few seconds, data picked up at surveillance points in major cities and landmarks across the United States

(A: It's everywhere, as I say...)

are recorded digitally on the spot, then encrypted and instantaneously delivered to a fortified central database center at an undisclosed location to be aggregated with other intelligence. It's part of a program called TrapWire and it's the brainchild of the Abraxas, a Northern Virginia company staffed with elite from America's intelligence community.

(A: That's why it's in Northern Virginia.)

The employee roster at Abraxas reads like a who's who of agents once with the Pentagon, CIA and other government entities according to their public LinkedIn profiles, and the corporation's ties are assumed to go deeper than even documented.

The details on Abraxas and, to an even greater extent TrapWire, are scarce, however, and not without reason. For a program touted as a tool to thwart terrorism and monitor activity meant to be under wraps, its understandable that Abraxas would want the program's public presence to be relatively limited. But thanks to last year's hack of the Strategic Forecasting intelligence agency, or Stratfor, all of that is quickly changing.

Hacktivists aligned with the loose-knit Anonymous collective took credit for hacking Stratfor on Christmas Eve, 2011, in turn collecting what they claimed to be more than five million emails from within the company. WikiLeaks began releasing those emails as the Global Intelligence Files (GIF) earlier this year and, of those, several discussing the implementing of TrapWire in public spaces across the country were circulated on the Web this week after security researcher Justin Ferguson brought attention to the matter. At the same time, however, WikiLeaks was relentlessly assaulted by a barrage of distributed denial-of-service (DDoS) attacks, crippling the whistleblower site and its mirrors, significantly cutting short the number of people who would otherwise have unfettered access to the emails.

On Wednesday, an administrator for the WikiLeaks Twitter account wrote that the site suspected that the motivation for the attacks could be that

particularly sensitive Stratfor emails were about to be exposed. A hacker group called AntiLeaks soon after took credit for the assaults on WikiLeaks

(A: Well, AntiLeaks is probably just a name they dreamed-up at Stratfor and Abraxas to do cyberattacks, obviously.)

and mirrors of their content, equating the offensive as a protest against editor Julian Assange, “the head of a new breed of terrorist.”

It says. I’ll put that up tonight too. And also I’ll put up tonight though some things to do, some PDFs to do with this organization. They’ve got the Partnering Agreement; quite an interesting agreement between Abraxas and also Stratfor. And this is the actual agreement they came to for their deal, the official one that is. I’ll put that up tonight for you to look at it and it gives you the roles and responsibilities to each other as they’re working together; it’s quite interesting. I’ll also put up another one and it’s to do with “Safe Harbor Privacy Policy, TrapWire,” a PDF. It says...

This Policy outlines our general policy and practices regarding personal information entered into our United States based systems by European Economic Area (“EEA”) subscribing customers, and personal information entered into our EEA based systems which may be accessed from the United States.

And again, it’s quite interesting when you go through the legalism of the actual documents themselves, how they even define what personal information is; it’s all legalisms, right. Sensitive personal information is on it too and so on and so on. Anyway, I’ll put that up tonight as well and also their white paper. It says...

TrapWire General Description

Again, the official PDF, I don’t know if it’s still up there yet or not but I’ve got a link to the site too; you can download it tonight for those who want to do it. It’s quite interesting.

Now, there’s a guy hanging on the line here; I think it’s Mike from Pennsylvania. Are you there Mike?

Mike: Yeah, yeah, I’m here.

Alan: Go ahead.

Mike: Okay. I just want to tell the listeners that even if it’s 5, 10 dollars, just donate to this show, anything you can, just to keep it going because I help support it too. About 9/11, 2011, this new demonic date... I was out in Las Vegas (I live in Pennsylvania), so I was out there at the time, it was right after their big séance around that time and massive helicopters, all over the city, all day, all night, literally; when I get home a few days later massive drones, everywhere, literally day and night. I mean, literally hundreds, sometimes even a thousand a day; because I’ve got really sensitive ears. I go back to Vegas, a few times since then, and helicopters day and night. This is the new America. Now, in Pennsylvania, I’m in the last urban county about an hour and a half from Philadelphia. Now I’m thinking of going way up north there, north-central Pennsylvania; but they’re going to be there someday too. Fort Indian Town Gap there’s going to be over a hundred drone sites, I mean well over, and they’re probably lying about that; they lie about everything, the government. They’re going to be up there

someday. I have relatives that live one county north; I was up there a few times, I don't hear nothing, they said they don't hear anything. But it's coming.

Alan: Oh, it's coming, yeah. They've already admitted...

Mike: Where do you go? Do you go to Maine? Do you go to Montana? I noticed that they might be... I don't see them on the map. Do you go to certain parts of Canada or do you take political asylum in a country that has some weapons, like Russia, or something? I don't know. What do you do?

Alan: Well, you're quite right because they've said it, this is the future— this is the future for the U.S. forever. And It's going to be a big part of the economy, is even making drones in North Carolina; they said they're going to turn the state into one of the biggest drone creators for big business. And other articles have come out. Every police force across the U.S. wants drones, their own little drone stations, so you're quite right: They're going to be absolutely everywhere. Not just the big ones that you're seeing but the smaller ones too, right down to insect-size things, so, I mean, this is the world they're telling you they're going to bring in and you're supposed to just accept it dumbly and go along with it.

Mike: Your brain can't work. I'm sort of just a tiny bit creative but, I mean, my brain can't... I have to carry headphones when I go outside, even in the house because of these bastards. And, I mean, you know, what do you do at a certain point? I mean, they're going to mow people... I mean, I think they're going to kill, not just by firing on houses, I think this infrared is blasting through people's houses already.

Alan: Well, it is. Actually they've been doing that...

Mike: I think the drones themselves are going to kill people because if you google searches on animals about real high, low, frequency noises and high decibels, it literally shortens their lives.

Alan: It does...

Mike: And they're doing this day and night....

Alan: In the 70's they brought out a movie called **Blue Thunder** and that was one of the preparatory movies to get us all used to the idea of big, futuristic helicopters going over, watching us through our roofs, through our walls, through everything; and we're here— it's actually here; they've been doing it for years. But now with the drones, of course, they've got a lot more in the sky. And you're quite right, they do have infrared capabilities. They do bathe your home in microwave as they look through you, and so on.

Mike: Yeah, they don't need the TSA to come to your home.

Alan: No, they don't...

Mike: I mean, this is just so demonic what has happened to this country. I just can't believe that you can't even get... I mean, I go outside and I do "Sam Kinison" rants; I yell and scream at the airplanes when they... but the neighbors, they don't care!

Alan: They don't, no. They'll adapt into it. There's so many movies out now and so many domestic dramas about terrorism on, they're already adapting by fiction into the reality, so they do it quite... it's all working together, you see...

Mike: I mean, where do I go from... Do you think north-central Pennsylvania? Maine? Montana? Where? Leave the country?

Alan: Leave the country; lots of folk already have. They've left the country and they've gone elsewhere because they know that they're the most surveyed country, apart from Britain, is the U.S..

Mike. And then you hear Italy is getting drones. I mean, they're all going to have drones. I think maybe the countries with the guns you might be able to have a little hope there; I know the new world order hates Slavic people. I'm half Slavic and half Italian, but...

Alan: It's going to be quieter in Russia than it is here.

Mike: Yeah, yeah, I understand.

Alan: And so, that is the future and every article from all academia will affirm that, that is our future, get used to it— that's what they're telling us. That's what the CFR is telling us, *get used to it*, in an article I read last week about drones.

Mike: I literally have to sleep in a bunker down in the basement, literally. This is how awful.... I wanted you to comment too about the theory that the U.S. is going to roll over Russia and China, or are they just actors?

Alan: Yeah, okay, I'll do that when I come back.

Back after this break...

Hi folks, I'm back Cutting Through the Matrix. And, just to answer the caller's question about Syria and to do with China and maybe even Russia, agitating about what's happening; they come out and say the right things, certainly, but remember, China, for instance, is still a totalitarian system— very much so. And so there are politics involved. But remember too that China also holds the debt, pretty well a good part of the debt—most of the debt for the U.S., so there's something else going on. And we've got to remember too that the big boys who created the Royal Institute for International Affairs set up the whole agenda for Free Trade across the world and special partners and all the rest of it; China was to be one of them down the road. In fact, we built China up out of nothing. So it's not an enemy at all; it's completely interwoven with what we do. Now they're still pushing for more territory in their own China Sea region, of course, but I don't think they'll do anything if the U.S. goes into Syria. Russia too, it's very doubtful, even from a financial aspect, in the present situation, if they'll actually do anything either. If they keep complaining they can get various concessions from the U.S. to get things that they want, if they keep quiet and that might be the agreement — if they keep quiet and allow it to happen it's because the U.S. has given them what they've wanted and that's really how these kind of geopolitics and so on works. So, we'll have to wait and see. But we're in a world order regardless. And, we've got to remember too that the Soviet system didn't just collapse by itself; it went out to merge with the West because we, now, are using the same planks of the communist manifesto — and actually, we've fulfilled them all, right down to the destruction of marriage and all the rest of it. It's all been fulfilled in the West. So, that was the idea. Lenin, he said that the whole dictatorship would last for about one generation or 70 years and then he said we'd blend in with the West: Not quite capitalist, not quite communist— it's now what they call "liberal" or "socialist" but it's really totalitarian! That's what it is. So I don't expect any real opposition at all from the big boys whatsoever, even though the

U.S. is putting missile sites around countries that surround modern-day Russia just as an added safeguard, but I don't expect anything much will happen there for a while.

And getting back to WikiLeaks, it says...

WikiLeaks says website was target of cyber attack

(A: And this is from Reuters, and it says that...)

WikiLeaks said its website had been the target of a cyber attack late on Tuesday as it proceeded with the release of thousands of previously unpublished U.S. diplomatic cables, some still classified.

"WikiLeaks.org is presently under attack,"

It says. It's getting 4 gigs per second actually banged at their Australian site and I think less actually elsewhere, but it described the problem as a cyber attack. So it is a cyber attack, probably a cyber attack and it's not a bunch of children in the U.S. that's ticked off at them for letting a lot of the cats out of the bag on security within the U.S.; it's obviously one of the big agencies itself. So they're actually retaliating now, as they set them up to do; you're actually seeing cyber warfare. And cyber warfare has been going on for a long time, mainly against small characters as they fry your computers and things like that or you can't get access, like half the time I can't pull up sites during the day when somebody's playing with me. But this is the big type of cyber attack where you can't get in there because they're hitting it with so many computers all at once and that's how they're doing it; that's the world we're living in. Because you see, you're not supposed to know that private intelligence agencies are running pretty well the world on behalf of their masters —the Royal Institute of International Affairs and CFR— that planned this 100-year plan of globalism, and you're going through part of it today, the latter part, not the end though, but the latter part because there's another stage after this.

From Hamish and myself from Ontario Canada, it's goodnight and may your God, or your Gods, go with you.
